

KEEPING YOU INFORMED THE NEW INFORMER-IP

*Direct wired Ethernet with PoE
Wireless WiFi*

The WiFi option allows a wireless connection to your network. Using existing network infrastructure significantly lowers installation costs and simplifies wide-scale deployments.

Federal Signal's long-standing Informer is now IP-enabled. The Informer-IP can be used as a warning device, a two-way intercom and an alarm initiation point. Send live voice, text to speech and prerecorded voice or tone files.

A loud internal speaker and a sensitive microphone provide clear two-way voice communications.

*Wireless transmitter
for two-way alerting*

With Federal Signal's SmartMsg, alerts can be sent to phones, SMS, hand-held radios and computers.

Scrolling message displays

External panic/emergency push buttons

PA speaker systems

The Informer-IP has an audio output for connecting to existing PA systems, two relay outputs to control strobes or other devices and an RS232 port for driving a scrolling message displays.
